

FOR IMMEDIATE RELEASE:

Arch Environmental Equipment, Inc. Develops Multi-Barrier Seal for Troughing Belts

Solution to Fugitive Dust and Premature Friction Wear Finally Realized

Paducah, KY-February 3, 2009- Arch Environmental Equipment, Inc. announced in January the release of the Talon® Seal, a skirt seal that utilizes the ‘more is better’ theory. Manufactured with wear-resistant EPDM rubber, the Talon® Seal minimizes belt friction using a multi-barrier seal design to guard against fugitive dust and spillage.

The unique design includes a flexible heel and toe that auto-adjusts to belt sag and troughing angles maintaining a consistent, spill-proof seal. Resistant to ozone, weather and UV factors, the highly durable Talon® Seal withstands temperatures up to 250° and is available in continuous lengths up to 600’.

Consistent with Arch’s goal of providing products that are simple to install, use, and maintain, this seal is easily installed using existing clamps and automatically conforms to the dynamics of any troughing conveyor belt without maintenance.

Arch Environmental Equipment is a manufacturer and distributor of a wide range of mechanical and electrical products designed to improve the efficiency and safety of conveyor belt systems.
